REVIEW  
INSIDE

## New 16-bit micro from Sinclair?

THE IMMEDIATE future of Sinclair Research was being decided this week as top executives from the troubled computer firm met representatives of its major creditors - owed around £15m - to try to agree a short-term extension of the company's credit.

Cash is urgently needed to carry through developments of new 8- and 16-bit machines. See page 4

## Amstrad beats Atari to 256K

AMSTRAD has announced its second new micro in two weeks.

The machine, called the PCW8256, is a home or office word-processing system, something of a departure for Amstrad.

Based on the technology used in the 6128 the new PCW 8256 offers 256K Ram, a Z80 processor and a sophisticated icon-driven word processing software program in a package which includes a single 3 inch disc drive, high-resolution monochrome monitor and near letter-quality dot-matrix printer. The computer, disc unit and much of the printer software is built into the compact monitor unit to keep the keyboard and printer as light as possible.

The whole system including the micro, monitor, disc and printer is to be priced around £450.

Unlike Amstrad's previous computers the PCW 8256's much expanded version of Basic is not built-in. Instead it is supplied with the machine on disc and must be soft-loaded.

Like the 6128, the micro is CP/M compatible running version 3.0 (CP/M Plus) and is also supplied with Digital Research's GSI graphics extension package.

The micro can also be expanded with an additional 1M

3 inch disc unit, a space for which is provided behind a removable panel on the monitor unit.

Like the 6128 the 8256 was commissioned from Amstrad by Indescomp Inc primarily for the US market.

It will be available shortly in the UK, in the autumn in the rest of Europe, and launched, according to Jaime Pero, President of Amstrad Computers US, in late 1985/early 1986 in America.

## EDITORIAL

It is difficult to pick up a paper these days without reading some story on 'why the micro bubble burst'. Commentators, who only eighteen months ago championed the micro boom, are now busy banging nails into its coffin: micros 'failed' because they were a product in search of an application.

They are all wrong. Yes, it is true that for the moment the micro's only serious home application is word processing; it is also true that the dreams of armchair shopping or the 'automated' home remain unfulfilled.

But the micro has found its role as an entertainment medium. Anyone familiar with programs like *Elite*, *Frankie Goes to Hollywood* or *Dun Darach* would be forced to agree the computer game can be a complex and compelling form of entertainment. As valid a leisure pursuit as reading a book, listening to a record or watching a film.

As the music, publishing, film, and now computer, industries continue to move closer together an increasing number of artists and authors are beginning to dabble with micros: the list includes Arthur C Clarke,

Douglas Adams, Andy Warhol, George Lucas, Rik Mayall, Pierre Boulez. This week book publisher Hodder and Stoughton launched its version of *The Rats* based on James Herbert's top selling novel. Hutchinson's adaptation of *The Fourth Protocol* is still riding high in the software charts.

With technology still advancing fast the micro offers the intriguing possibility of true interactive fiction—combining elements from a book or film so that the reader/viewer can control by decision-making the development and outcome of the story. Pieces of the jig-saw are already in place; startling graphics like those of Terry Greer used in *Interceptor's* Amstrad adventures and the sophisticated text detail of the Infocom programs. All that's needed now is more memory.

Even if time eventually shows the interactive novel to be a creative cul-de-sac, the prospect is a fascinating one.

Those who are now ready to write off the micro as a spent force will be proved wrong.

# First signs of a new QL machine

AS WELL as the much rumoured 128K Spectrum model Sinclair is now known to be working on a new 16-bit machine. The new micro is thought to offer 512K Ram and be based on the technology developed for the QL, yet without microdrives. A disc option may be provided instead.

Both new micros are likely to be shown for the first time at this year's *Personal Computer World Show* in two week's time. Mikro-Gen could be the first company to show software for the new Spectrum the company is already planning a range of

titles to launch for its MicroPlus Spectrum Plus expansion system, believed to be compatible with the new micro.

MicroPlus looks rather similar to a joystick interface but provides a Rom expansion giving the Spectrum Plus an increased memory size available for a game, thus giving opportunity for more complex graphics or playing area.

The first title on MicroPlus will be *Shadow of the Unicorn*, and Mikro-Gen is also planning a licensed title, *Battle of the Planets*.

Triptych Publishing, the

company which wrote the Brainpower series, is also thought to be writing specifically for the Spectrum 128 and the Pandora portable.

Dixon's, whose £10m order – apparently agreed before the Maxwell take over plan was mooted – was heralded by Sir Clive Sinclair as wiping out the need for a specific rescue deal, has now begun selling its new Spectrum package: Spectrum Plus, joystick and interface, data recorder and ten pieces of software for £139.99 in all Dixon's stores. Its original package – Spectrum Plus, ZX printer and flat screen TV at £199.99 – is still running while stocks last. The discount store Comet is now selling a similar package at £159.99, and discount packages for independent retailers are also expected.

The creditors meeting called on Monday – involving Sinclair and representatives from Thorn EMI, Timex, AB Electronics, Barclays and Citibank – follows the failure of Robert Maxwell's £12m rescue bid three weeks ago.

## Mighty Oaks available from Acorn's BBC

OAK UNIVERSAL and Acorn have signed a deal for Oak to sell the BBC and BBC Plus as single board computers.

The Oak range offers all permutations of BBC components and peripherals from the basic keyboard and processor board in Oak's own casing at £499 up to the full Oak personal computer, comprising motherboards for BBC and BBC Plus, 65 watt power supply, dual 400K double-sided disc drive, Z80 second processor, CP/M, word processor, spreadsheet, graphics, database, system generator, CIS Cobol, and BBC Basis for £1,325. The keyboard and processor casings only can be bought for £86.95.

## Hollywood's worst in Global deal for micros

FOLLOWING the licensing of such box office hits as *Rambo* – *First Blood 2*, *Alien*, *Superman* and *Gremlins* comes news of a deal involving the worst films ever.

Global Software, which was formed in March this year by former employees of Argus Press Software, has obtained software rights to films featured in the cult book *The Golden Turkey Awards*.

The book, written by two Californians Harry and Michael Medved, awards 'Golden Turkeys' in categories such as *The Most Embarrassing Movie Debut of All Time*, or *The Worst Vegetable Movie of All Time*.

The first game in the new series is to be *The Attack of the Mushroom People*, based on *The Worst Vegetable Movie of All Time*, which is to be released for mid-October for the Spectrum at £6.95 and the Commodore 64 and Amstrad at £7.95. The second game, *Revenge of the Killer Tomatoes*, will follow shortly after.

Global has also released a graphics and text adventure called *The Magician's Ball* which features Mike Oldfield's *Tubular Bells* licensed as backing theme.

# Acorn's shares trade again

TRADING in Acorn's shares began again on the Unlisted Securities Market last week. Starting at 2½ pence per share, the price rose at the end of the first day to 6 pence, and currently stand at 14½ pence.

The deal with Olivetti under which Olivetti's stake in

Acorn rises to 79.8 per cent is due to be granted shareholders' approval on September 2.

● Acorn's ABC range, which was put in abeyance in February prior to Olivetti's first rescue package, has been incorporated in the newly launched Cambridge workstation. This 32-bit scientific processor draws on much of the technology developed for the ABCs, which are still not being produced as machines in their own right.

## Hodder launches horror game

HODDER and Stoughton has now launched *The Rats*, the strategy/adventure game based on James Herbert's blood curdling novel.

The programmers, from Five Ways Software, have deliberately kept in many elements of the horror and spine chilling description that characterised the novel.

*The Rats* will be available in September, priced at £7.95, for both the Spectrum and Commodore 64. An Amstrad version is planned.

TWO new releases from *The Edge* – *Fairlight* (above) and *Wizardry* (cover) – are both arcade adventures with the emphasis firmly on 3D graphics and animation.

For the Spectrum and Commodore 64 respectively, both will be released in early September priced at £9.95. *Wizardry* will also be available for the Commodore 64 on disc at £12.95.

Oak has also produced its own modem, which fits internally in the disc drive case, at £135 with software.

Details from Oak Universal, 20 Crofters Green, Green Lane, Idle, Bradford.

# MUD slinging in Compunet resolved

FOLLOWING an outcry from Compunet MUD players after all Wizard status points were halved last week, the original rankings have now been reinstated.

Players who had attained the powerful Wizard status in

the Multi-User Dungeon reacted angrily after MUSE managing director Simon Dally reduced the rankings.

"We had had a lot of complaints from Compunet MUD users saying that those who had made it to Wizard were making the game extremely difficult for others to play," said Simon.

However, the outcry was so violent—some people having spent several hundred pounds reaching the coveted position that MUSE reinstated everyone's previous rankings, including those considered to have attained Wizard status by possibly devious means.

"The problem was really one of supervision of players," commented Simon. "Now that we can access MUD on a Gateway computer rather than needing a Commodore 64 proper supervision should be a lot easier."

# Hoover halts C5 – price tumbles

SIR CLIVE Sinclair's personal venture, Sinclair Vehicles, sank into even deeper trouble last week when Hoover stopped production of the C5 electric tricycle at its Merthyr Tydfil factory.

"Production has been halted while the £1.5 million writ is still hanging over the company," said a Sinclair Vehicles spokesman. "Hoover did not want to buy new parts when they ran out on behalf of Sinclair Vehicles."

Demand however can be met by stocks currently held by Sinclair – production prior to the stoppage was, however, only 100 per week. The writ, for non-payment of debts, was taken out by Hoover over a month ago, but has still to be served.

The C5, which has only

# Tolkien spoof reaches shops

*Bored of the Rings*, the adventure spoof on J R R Tolkien's *Ring* trilogy, is to be released by Silversoft.

Originally only available by mail order, publisher Delta 4 Software found itself unable to cope with the demand. As part of the Silversoft deal, Silversoft will expand the game adding new locations and graphics.

*Bored of the Rings* will be available by mid-September for the Spectrum and BBC at £7.95. Amstrad and QL versions will follow.

achieved about a tenth of its predicted sales of 100,000 so far, has already been heavily discounted. Electrical store Comet is selling it at £189, while from Vallance it costs £199, compared with a normal retail price of just over £400.

Brenford  
Middx

### Thargoid attack

Re Martin Croft's review of *Elite* (June 20 issue). Who says you can't survive a Thargoid attack? If you feel like trying, or just practising, on the BBC version (tape or disc) type *Copy, X, Delete*, and then galactic hyperspace (*Ctrl-H*), but hold down *Ctrl* until the routine has finished. You will be surrounded by Thargoids in *Witch* space.

This procedure (known as a back door) has been found to work on BBC (tape and disc). It probably works on the Electron as well.

A useful bug (BBC disc only) is the following. A capital of 1600 credits is necessary. Buy a mining laser (NB not lazer) on any view, then buy another mining laser on the same view. The computer will respond with *Laser Present* and your bank account increases in size by 3570.3 credits.

Peter Bevin  
62 St Denis Road  
Selly Oak  
Birmingham

There is also a *Witch* space routine on the C64 version. The mining laser 'bug' was only present on early BBC versions and has apparently now been corrected.

# Surprise package

Jeff Naylor evaluates Amstrad's latest surprise – the 128K 6128 machine now in the shops

Some manufacturers have a reputation for announcing new machines, then trying to get them working, and finally (or sometimes never) releasing them.

Amstrad doesn't work like that. Its new 6128 was available in some shops two weeks before being officially announced.

The micro features a Z80A processor, 128K of memory banked in two 64K blocks, a single built-in 3 inch disc drive and either a colour or monochrome monitor. Depending on the choice of monitor the whole package costs either £399 or £299.

The new CPC 6128 is a logical progression in the series of Z80-based Amstrad machines using and expanding on the same technology developed for the 464.

The original 464 provided Resident System Extensions to allow additional commands to be created. These were used to provide extra disc instructions when the DDI-1 disc unit was added to the system.

The 664 replaced the built-in cassette player with a disc unit and added a debugged Rom (no Line Input bug) and offered a slightly extended version of the 464 basic.

## Hardware

Now, only four months after the 664, Amstrad offers the new 6128. It contains an extra 64K of Ram, but the firmware is fully compatible with the 664. Bank switching has always been a feature of the Amstrad as Roms overlay the Ram addresses on the 464, and the 6128 extends the principle to an extra bank of Ram.

The first thing you notice about the 6128 is how neat it looks. It is a lot slimmer than its predecessors, achieved

because the disc unit is very compact and also by squeezing the keyboard and function keypad together and reducing the size of some keys. The cursor Copy key arrangement has also been altered; Copy has moved bottom left alongside a repositioned and enlarged Control key, while the cursor keys have been resited at the bottom of the function keypad. It's tempting to quibble about the keyboard changes: I don't like the small Delete key (which I'm always using) or the position of the right-hand Shift. The latter is sandwiched between Return and Enter, a duplicity caused by the need to retain the same number of keys as earlier machines. One final moan: all the keys are now the same colour.

Connections to the 6128 offer no surprises: stereo sound, joystick, tape, printer, expansion, power, monitor and disc drive two. Inside the case, a neat circuit-board nestles under the keyboard, but does not extend the full length, despite the extra Ram chips. There is about three inches of space between the board and the disc drive, making the new circuit-board small enough for use in a portable machine. Eight additional 64K Ram chips are used to provide the extra bank of memory. This is enabled through the video gate array in much the same manner as internal Rom selection is achieved. One further cause for speculation is a spare integrated circuit socket which will take a ULA chip...

And so to the £65,536 dollar question, asked of all eight-bit computers with more than 64K of Ram. What use is the memory that can't be addressed directly by the CPU?

If programming in Basic, the answer is a complex one, but it boils down to "not a lot". The 6128 uses the same Basic as the 664, so you cannot write bigger programs because the interpreter is unaware of the additional 64K.

Use of the extra memory is instead facilitated by a suite of RSX routines supplied on one of the system discs. Once these are loaded a number of extension commands become available.

## Firmware

*Bankopen,n* sets up the second bank of Ram for string storage; the *n* parameter defines the length of all the strings up to 255 characters. To use the space, commands *Bankwrite*, *Bankread* and *Bankfind* are employed. The whole system operates like a Ramdisc. You may read from or write to either the current record or one specified by an optional parameter, or search the memory for a string matching the one you have specified. In all cases a parameter returns the record number or a negative value if the operation fails.

*Screenswap* and *Screencopy* allow the

continued on page 10 ▶

# Machine review

extra Ram to be used for screen storage, but they do not reprogram the video chip to fetch its video information from elsewhere. All that they do is copy 16K blocks of data in and out of the video Ram area. You may store four additional screens, but displaying them can take half a second.

Machine-code programs will find the extra Ram much more useful, with a firmware call at &BDSB allowing access to the second bank, but in the short term it seems unlikely that software houses will write programs that cannot run on the whole range of Amstrad machines.

## Software

The main justification for the extra Ram is Digital Research's CP/M version 3.1 (CP/M Plus) which is supplied as standard with the CPC 6128.

Earlier disc-based Amstrad machines

run CP/M 2.2, but the video chip requires 16K of the memory map. Therefore the 464 and 664 have only 39K available for transient programs. Some CP/M programs need rewriting in order to run, and even then may be slow because of increased disc access.

The 6128 has none of these problems. Its version of CP/M exploits the extra Ram, resulting in a transient program area (TPA) of 61K. CP/M Plus includes a number of other improvements. More meaningful error messages are dis-

# POWERFUL UTILITIES

## FOR YOUR SINCLAIR SPECTRUM

### MAKE THE MOST OF YOUR MICRODRIVE WITH INTERFACE III

THE IMPOSSIBLE HAS BEEN DONE

Yes it's true this fantastic new peripheral will transfer **every** program available on to microdrive. Yes every one. Yes, indeed it is so easy to use that you can transfer **any** program to microdrive.

Just look at these features...

- Complete hardware and software (software on microdrive cartridge).
- Transfers **all** programs available on to microdrive.
- Very, very, easy to use. (If Clio can do it we're sure you can.)
- All programs reloaded **and** **run** once transferred.
- Makes a "snapshot" of any stage of a program. (Saved as a screen.)
- Transfer can be automated at any stage following "customised" versions.
- Will also save to tape. (Formatted speed once saved.)
- Programs will reload independently of the "Interface".

IF YOU HAVE A MICRODRIVE YOU MUST HAVE INTERFACE III

ONLY £39.95 Inc. P&P

#### DOUBLER III.1

After amazing success on the C64 we introduced "Doublers" on the Spectrum. Now we have improved it and have a "Mark II" version which has already satisfied hundreds of users. Requires the use of two cassette decks and has proved capable of 100% success with all types of speeds **regardless of length and speed.**

ONLY £14.95

#### B.B.C.

TAPE TO DISC UTILITY

The "TD ROM" is the most powerful utility of its type. It will transfer the vast majority of protected software onto your own disc. It is **VERY** easy to use and full screen reporting is provided.

Two versions are available: the normal Acorn D5 version plus one suitable for Ocas Sabote D5000.

ONLY £18.95

#### DATA RECORDER

A dedicated data recorder designed for use on the C64 or Vic-20. Specification as C2N but with pause buttons. Model available for the PLUS4 or 16 at same price.

SATISFACTION GUARANTEED. ONLY £29.95

**3M SCOTCH DISCS**  
Lifetime guarantee Box of Ten  
SSDD. £16.00 DSDD. £23.00

## NEW DISC SECTOR NEW V3.0

This **NEW** version of "D.D." has once again proved it as the leading copy/utility package for the 1541. As well as general improvements, plus the addition of more useful utilities, two **important** new programs have been added.

**"THE EVERSHAM HIBLER"**  
A first on the UK market. A true nibbler. Byte for byte copier. Copies ALL DOS errors automatically. This includes error 26-29 etc. plus non standard errors like full tracks, extra tracks, non standard sync, renumbered tracks, etc. No knowledge is required at all if just nibbles away" and produces a perfect copy. Yet it only takes 5-8 minutes. Has copied all discs tested (except boot). A class above anything else available.

**"FAST FILE COPIER"**  
An incredibly handy selective file copier that **LOADS** and **SAVES** at five times normal speed. Sounds useful? Too true. As well as these programs 17 other useful utilities are included. An essential purchase.

ONLY £29.95

Customers with earlier versions may return them along with £9.95 for "V3.0".

## NEW QUICKDISC+ NEW

Get a "QUICKDISC+" CARTRIDGE plugged into your 154 and your 1541 will really start to perform. Unbelievable value.

Includes the following:  
**Fast LOAD and SAVE** (four to five times normal speed). Will **LOAD** **most** protected software. Uses no memory area, can be switched in and out from the keyboard.

**Fast Format** takes just 10 seconds.

**Fast Backup** copies an entire disc in four minutes (not protected software).

**Improved DOS commands** (DOS 5.1).

**Fast File Copier** (selective).

**Integrates** Centronics printer software (user port) with C64 graphics capability. (160x160).

A **RESET** switch is fitted.

Now the price. No more £49.95. It's now **even** half that much. Can you afford to be without "QUICKDISC+"?

ONLY £19.95

No internal connections needed and unlike most similar products it is compatible with printers and second drives.

of hardware and special software. Requires the use of two data recorders. Tests have proved conclusively that "Doublers" can be 100% successful even with fast loaders. They said it couldn't.

ONLY £12.95

## DOUBLER

The amazing cassette port adaptor for the 154 is still keeping to 100% record. Consists

## STILL POPULAR

**"DISCO"**  
Still the best tape to disc utility for normal speed loading tapes. Simple to use but rarely beaten.

ONLY £9.95

**"FASTTRACK"**  
Converts most slow loading tapes to "Turbo" load. Simple and multi-part. Very easy to use.

ONLY £9.95

**"BIG MOUTH"**  
A speech test to speech synthesis program that is great fun to use. Unlimited vocabulary.

ONLY £7.95

## "COMMODORE CONNECTION"

Software and cable for connecting any Centronics type printer to the 154. Or use with "QUICKDISC+."

ONLY £19.95

**"AZIMUTH 3000"**  
Allows you to check and realign your data recorder head alignment. Screenview provided.

ONLY £8.95

**"THE ANATOMY OF THE 1541"**  
Get to grips with your 1541 with this very detailed book. Includes a full SCSI diagram.

ONLY £8.95

All prices include P&P and VAT. Send cheque, Postal Order or Credit Card No. Credit Card orders accepted by phone. Callers welcome. Wide range of goods stocked. Trade enquiries welcome. European orders send price as advertised. Outside Europe £2.00 for airmail. Mail order to Evesham Shop please.

Machine courtesy of G&B Computers, Tottenham Court Rd, London

played as a scrolling banner at the bottom of the screen (if you find this irritating you can disable it). Because more of the operating system is stored in Ram, there is no need to "warm boot" (ie press *Ctrl C*) every time you change discs. Although CP/M Plus is much improved, earlier CP/M software is easily up-graded, so the vast range of software (including the 'freeware' of the CP/M user's group) is now truly accessible.

The CPC 6128 comes with two system discs. In addition to CP/M Plus and the Bank Ram Manager RSXs, a host of other goodies are included. The Digital Research Graphics System Extension

(GSX) allows CP/M programs to use graphics. Logo is also supplied, along with some standard utility programs. Some of the machine-code tools though unfortunately assume that your processor is an Intel 8080 chip, so some have limited uses. Amstrad have also included *Disckit3*, a fairly friendly disc formatter and copier, while *Pip* (the file copy program) has been rewritten to work on a single drive system.

Just to be safe, one side of the system disc contains CP/M 2.2, useful if you upgrade from a 664 or 464 plus disc and want to run your old software.

Anything that runs on the other

Amstrad disc machines can be used with confidence.

If you wish to transfer files from cassette, then you will need to use the utilities on this disc, which are much the same as those for the 464 disc drive.

## Conclusion

Viewed in isolation from other Amstrad computers, the CPC 6128 is a very well-designed and manufactured piece of hardware. Some of the keyboard features may seem retrograde step to current Amstrad users and the extra memory is not particularly useful to Basic programmers. The 6128 is still only a 8-bit machine (a boring Z80 crate, according to one commentator).

But each of these points can be countered - the restyling has resulted in a more attractive machine, the improved CP/M, CP/M Plus, is only possible because of the memory size, and Amstrad must be praised both for the compatibility of their computers and the size of the existing software base.

Which leaves the prices: computer, disc drive and monitor for £399 in colour, £299 for a green screen.

They represent a new step in value-for-money. The green screen version is only £20 more than Commodore's proposed C128 - and that has neither disc nor monitor. As for the BBC B Plus at £499 - no comment.

The 6128 is the most attractive new 8-bit micro so far this year. The only people who may complain will be those who have just bought an Amstrad 664.

## Amstrad CPC 6128 Specification

Processor:	Z80A
Ram:	128K in two 64K switchable banks
Rom:	48K including Locomotive Basic (same version as used by the CPC 664)
Disc (built-in):	Hitachi format 3 inch
Disc operating system:	CP/M version 3.1 (CP/M Plus) and AmsDOS plus CP/M version 2.2
Disc software included:	Dr Logo, Graphics System Extension (GSX) <i>Disckit3</i> disc formatter/copier, <i>Pip</i> file copier
Monitor:	Choice of colour or monochrome monitor
Display:	Max 640 x 200 pixels. 20, 40 or 80 column
Sound:	3 voice (AY-3-8912 chip)
Connections:	Stereo sound, joystick, cassette, printer, general expansion and additional disc drive ports
Prices:	£399 (with colour monitor) £299 (with monochrome monitor)

## Spirited

**Program** *That's the Spirit* **Micro Spectrum 48K Price** £7.95 **Supplier** The Edge, 31 Maiden Lane, Covent Garden, London WC2

In the future all cities won't look like Milton Keynes - they'll look like New York instead. They'll also all be called New York. And spirits will be banned, though thankfully just the ectoplasmic not the alcoholic kind because the game background doesn't make much sense while I'm sober.

Understanding the game itself isn't that easy either. First appearances reveal a pick-things-up-and-find-them-use arcade adventure, but I was stumped until I received a Help sheet.

Once collected you can Examine (ie magnify) objects

and even Connect some of them together to make them work. This is certainly similar to the puzzles that have pleasurably plagued text adventurers, though here there's the added difficulty of actually recognising an artifact from its appearance.

With an operating laser you can start frying the spirits, avoiding contact which will drive you insane. You also need to sleep every so often - tiring work this ghost hunting!

It's a good looking game, in particular in its settings, and there's some nice sound. A multitude of key presses keeps the options open and it's all rather witty - try pressing Swear or start up the QL. Whether you call it subtle or merely infuriating will depend on your attitude to the genre.

John Minson

to 40 sprites can be defined at once, the maximum size being 32\*46 pixels. The sprites are 'non-destructive' of any information already on screen and you have full control over wraparound, bounce and collision detection. The sprites can be animated in sequence, are smooth and flicker free. The speed of the response is good from Basic as long as you don't have too much happening on screen at once - 40 separate sprites would be ridiculous.

There is also a very-easy-to-use sprite editor which looks like a large copy of those UDG designing grids, but gives you full control over colour palettes, allows

## In ore

**Program** *Nick Faldo Plays the Open* **Micro Spectrum 48K Price** £9.95 **Supplier** Argus Press Software, Liberty House, 222 Regent Street, London W1R 7DB

Now the boxers have endorsed sports simulations it's the turn of the golfers and first on to the fairway is Nick Faldo.

I'm not sure how much Nick was concerned with game development but he has provided a booklet on playing the Royal St George's course with its treacherous shifting sea winds.

Golf games consist of choosing the correct club and calculating the angle and

the graphics with a scrolling view of the course, flying golf ball, and icon control.

Actually these icons are more than a flash accessory and many people will prefer a moving bar for power to 'Enter 1-100'. Judging the angle was always difficult enough without having to convert it to degrees. While taking the shot these can both be fine-tuned. There's also a caddy who informs you if you've chosen the wrong club - useful for non-golfers - and comments, most often sarcastically in my case, on your efforts.

It's all most appealing apart from one near fatal flaw. Without any magnification on the green, putting is extremely difficult and impossible when the ball is near the flag.

Not a hole in one, perhaps,

force of shot. They were among the earliest programs but Argus has dragged them into the present by improving

better than par for the course.

John Minson

## In motion

**Program** *AmSprite* **Micro CPC 464 Price** £8.95 **Supplier** The Electric Studio, PO Box 96, Luton LU3 2JP

This is the first Sprite graphics package I have seen for the Amstrad computers. It seems to be a reasonable utility, although it has some drawbacks that may make some people want to hang on for the release of something more powerful such as White Lightning. The good points are that the routine takes up very little memory space, up

scrolling, mirroring and reversing of images and can read the information to and from tape or memory.

The drawbacks are that you are restricted to working in mode 0, sprites cannot be defined offscreen and moved on, there appears to be no method of relocating the spriter movement code, and control of sprites from Basic is only achieved by poking a series of memory addresses with data. It is a shame no attempt was made to exploit the ability of the machine to add commands to the Basic

itself, making the whole thing more user friendly. Thy manual is a classic example of why documentation shouldn't be written only by those who know exactly how the program works. It took me ages to work out some points, and I'm sure programming beginners could easily be baffled. The company also seem to have shied away from any mention of where they stand on copyright when games are produced using this utility.

Tony Kendle

## Hyde bound

**Program** *Mad Doctor* Micro  
Commodore 64 **Price** £8.95  
**Supplier** Creative Sparks,  
Thompson House, 296  
Farnborough Road,  
Farnborough, Hants

**Y**ou know all those classic horror movies where the mad scientist steals bodies intent on building a human being out of spare parts, only to be foiled at the last minute by our hero who saves the village from its dreaded threat?

Haven't you thought like me, that just once, wouldn't it be nice if Christopher Lee turned the tables on Peter Cushing and the monster won?

Here's your chance with a very clever arcade adventure game from Creative Sparks called *Mad Doctor*. You are cast as the evil Dr Blockenspiel, who is intent on carrying out his late uncle's legacy of building the ultimate spare-part human. These ghoulish experiments take place in your castle, which, fortunately for you, overlooks a small sleepy village stocked with many po-

tential victims. Using your joystick, you guide your doctor through six areas of the village ranging from the poor sector, and the village dwellings where the pub is to be found, through to the graveyard and the main centre which houses the hospital, a good place for supplies of needle and thread! The plan is to come upon an unsuspecting villager, bash him or her to death and cart off the body to your lab for a quick once over, select a useful appendage and then bury the remains. Choosing the right victim is important, you don't want your monster running around with a screw loose!

Sooner or later, as a result of your little trips, people become suspicious and chase you as soon as you venture out. Using cunning and strategy, and the odd hidden passage, you can outwit the village and realise your manic ambition, but beware choose the wrong parts and your final creation might just turn against you.

Plenty of locations, good 3-D graphics. And just when I thought games were getting really wholesome.

**Andy Moss**

## Head monitor

**Program** *Assembler* Micro  
Commodore 64 **Price** £16.95  
**Supplier** McGraw-Hill,  
Shoppenhangers Road, Maidenhead, Berks

**T**his is a sophisticated utility program designed to translate

standard assembler mnemonics into machine code.

For the experienced programmer it is an essential tool, although I cannot recommend it for the novice, due to the lack of any detailed instructions in the accompanying manual. It is only 14 pages long and assumes that the reader is fully conversant with C64 machine-code.

The assembler has a num-

## No aid

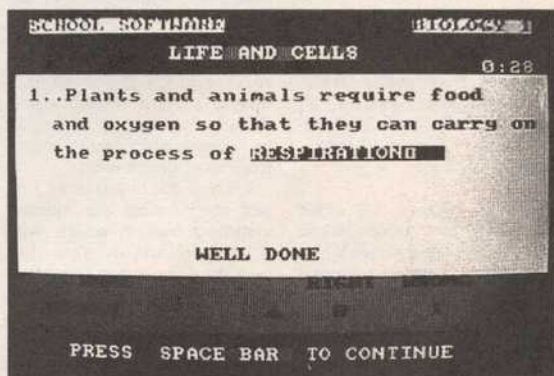

**Program** *Biology 1 O-level*  
Micro CPC 464 **Price** £7.95  
**Supplier** School Software,  
Meadowvale, Raheen, Limerick, Ireland

**H**ave you ever wondered why people bother producing programs that simply duplicate the function of a book, but at five times the price?

I suppose that the answer is that using a computer can provide a motivation that a 'boring old book' couldn't do,

"Wrong! The correct answer is SANDY".

In order to get over such infuriating drivel, adventure games programmers have had to learn how to develop some quite sophisticated language parsing routines in just a few K. Isn't it about time that education programmers woke up to the fact that our children deserve something just as good, or better? If nothing else there should be a routine that gives a choice of correct answers, recognises slight misspellings and even corrects them, or searches the response for recognised strings within it. It

so I won't play too much on the fact that this program consists of only about 100 text questions that any revision aid book worth its salt will improve upon. However, I will take exception to the fact that the thing has been programmed to carefully exploit all the worst points of a computer - most notably its inability to think. Consider this exchange. "Question: what type of soil is very free draining and low in mineral salts?" - my answer is SAND -

may not work all the time but it would be better than nothing.

If you want your children to grow up without the ability to provide imaginative responses to questions, to become obsessed with semantic trivialities or to become so frustrated they never want to see another education program again, then this is the tape for you.

**Tony Kendle**

ber of interesting features incorporated in the design to give the programmer an easy life. For example, the source file (assembler Mnemonics) is written in normal Basic lines which means that the Commodore's own powerful text and screen editing system can be used. Also, the unassembled source file can be saved to tape or disc.

Another feature is the ability to run your programs with the assembler still in memory, invaluable when develop-

ing software. The assembler can be directed to store the assembled code anywhere in memory thus utilising all available memory space. Both disassembler and assembler can reside in memory simultaneously.

An excellent utility which I can thoroughly recommend. The disappointment is the lack of detail for the novice machine-code programmer.

**Andy Moss**

## Drop dead

**Program** *Hangman VI* Micro Commodore 64 **Price** £7.95 **Supplier** McGraw Hill, Shoppenhangers Road, Maidenhead, Berks SL6 2QL

Yes, it's back to that old favourite, *Hangman* – this time, disguised as an educational program for 11-13 year olds.

I'm sure all you intellectuals know how to play *Hangman*, so I won't bore you with the details. Suffice it to say that you only get seven chances to guess the letters before suffering a terrible death on the gallows. There are four levels of play, and the computer holds a bank of 800 words. Plenty to keep you busy, but if

this isn't enough, you can also enter and save your own list of words. And if playing the computer becomes boring, you can always find a friend and give him/her a game just as if you were using a pencil and paper.

*Hangman VI* is certainly a very good program. It's got quite decent graphics and screen layout, and it even plays the odd tune or two. I did manage to crash the program once, though (syntax error line 37667).

The tape has got plenty of options, I only wish I could get the computer to give me a few clues. If you fancy a *Hangman* program and want to learn something as well, you can't really go wrong.

Tom Hussey

## Pyramid pest

**Program** *Abu Simbel Profanation* Micro Spectrum 48K **Price** £6.95 **Supplier** Gremlin Graphics Software, Alpha House, 10 Carver Street, Sheffield S1 4FS

Poor old Johnny Jones (from Indiana?) didn't allow for the curses of Ramses II.

[[?]] he retired into his pyramid.

Luckily old Ramses was a forward-looking pharaoh and had equipped his home with teleports and hidden doors triggered by hi-tech hieroglyphics. Unluckily his attitude to pest control was less advanced and the resting place was quickly overrun with everyday pyramid pests like malevolent mummies, sinister spiders and every day sort of nasty.

A plague of locusts? Worse! The handsome hero and two-fisted explorer was transformed to resemble nothing more than a grape with two legs! Afraid that this would ruin his love life (would you like to be caught kissing a smiling, winking grape, even when it's as well animated as

This means that once again we're running left and right and jumping to two heights to collect keys and map a path through the game. Basic arcade adventures of this type need some selling point and in this case it's the beautiful, atmospheric backgrounds and the comical hero who re-

## Magical moon

**Program** *Red Moon Micro* Spectrum 48K **Price** £6.95 **Supplier** Level 9 Computing, PO Box 39, Weston-Super-Mare, Avon BS24 9UR

There have been some excellent *Quilled* adventures, but sadly all too often the ease of this utility has led to feelings of *deja vu*.

Level 9 uses its own text compression system and, backed up with someone's rich imagination, this has produced a succession of eagerly awaited classics.

From the moment this adventure starts, looking out over a sea of grass, your quest to find the Red Moon Crystal begun, there's a feeling of care with a capital Q for Quality. It's not just the amount of text, nor the optional pictures that head most locations. *Red Moon* is so richly written by David Williamson and Pete Austin that it makes

the term 'interactive novel' seem almost credible. Care has also been taken over the internal logic of the Island of Baskalos.

The game is rather more than an exercise in object

gathering and puzzle solving. The *Cast* command allows for magic, though you'll need to find a focus for some spells. Iron prevents magic which is an important factor when choosing what to carry, and you have limited strength for spell casting, none of which makes life easy.

Highly recommended.

John Minson

## Solo

**Program** *Chinese Patience* Micro Spectrum 48K **Price** £1.99 **Supplier** Atlantis, 19 Prebend Street, London N1 8PF

You don't have to be oriental to play *Chinese Patience*, a successor to the highly praised *Nines* card game from the Atlantis budget range.

For those unacquainted with this patience variation it's played competitively, the winner being the first player to dispose of all the cards.

You do this by placing cards in ascending sequence by suit on one set of piles, or in descending value in alternate colours on another four piles. Strategy comes in the ability to manipulate the sec-

ond set of piles to open up new runs or, more sadistically, to transfer cards to your opponent's stack under certain circumstances. A turn continues until you can no longer discard cards.

If this all sounds complex on paper it soon becomes obvious in play and the subtleties of shifting cards to your best advantage, and your opponent's disadvantage, soon become clear. You can play sequences of games and I was soon hooked on attempting to beat my Spectrum.

Here lies the game's main problem though. The micro plays rather too well and some will find it dispiriting to be thrashed time after time. But it's a very neat implementation at a ludicrously low price.

John Minson

minds me of *Bugaboo*, the Hispanic flea. Coincidentally the *Abu Simbel* title was written for Gremlin by Spanish authors.

Set against the backdrop is the excessively reflex testing timing needed to avoid the nasties. I'd have preferred

strength reduction on contact to instant death for this reason but doubtless one reviewer's impossibility is another player's challenge, and you can't say pharaoh than that.

John Minson

# Pandemonia

Machine code action on the BBC B from the  
keyboard of Jeffrey Cooke

In this game, you must move your character around the screen using A, Z, P, and / keys, collecting red objects as they scroll past at lightning speed, avoiding the white crosses. Ten must be collected within the time limit of 20 seconds, or you loose a life.

If you do collect ten, you move onto the

next screen (there are 16 in all). On further screens you are pestered by such strange things as wandering fish and stray pixels. Be warned - this one is not easy!

The program is printed in two parts - this week and next, on the BBC page. When run, disc users should first type in

Page = &1100.

If all that code proves to be too daunting, tape copies of the program can be obtained from the author for £2.50. Write to Jeffrey Cooke at 152 Galliagh Park, Londonderry, N. Ireland BT48 8DF.

# Twain meets twain

Use Spectrum screen pictures on your Amstrad with this program by **J Keneally**

**C**reating screen pictures can be very time-consuming even with a good graphics designer. This program allows any Spectrum screen dump to be read into the Amstrad and developed onto the screen in the same colours. There are a wealth of excellent Spectrum screen pictures around which can be used as a starting point for your own Amstrad screens.

Alternatively the program can be used to speed up title screen loading. Even on fast load, the 16K Amstrad screen takes along time to load. It is much quicker to create the screen on a Spectrum, dump it, and use that instead. It also makes life more difficult for the pirates!

To transfer between the Spectrum and CPC464 screens we must scan through each Spectrum screen pixel, then for each pixel check whether it is on or off, and decode the corresponding colour from the Attribute block. Now encode the colour into CPC464 (*Mode 0*) format and write the encoded colour to the screen.

The process is slightly complicated by the mis-match of the number of horizontal pixels per line. On the Spectrum there are 256, on the CPC464 (*Mode 0*) only 160. We must either compress three Spectrum pixels into two on the CPC464 (covering 240 pixels on the Spectrum and losing the other 16), or 'frame out' any 160 pixels on the Spectrum without compression. Both these options are available in the program.

Of course, the Spectrum screen dump must be read into the CPC464 first. This is read into locations 32768 onwards, using a special reader routine. This routine will in fact read in any Spectrum memory dump.

Typing in should be straightforward, though it is easy to make errors when entering the Data statements in Lines 670 onwards. For this reason, each of these lines has a checksum incorporated. If you make a mistake you will get an error message when the program is run.

After running the program, you will be asked to load the Spectrum screen dump, and press a key to start loading it. On completion, you will have a blank screen with the legend: F, W, I or S shown. These are the command keys as follows:-

F = display the Full compressed picture  
W = display a Window of 160 pixels. You select the window by entering a horizontal offset. A zero value means start from the extreme left of the picture. The code for this has been written mainly in Basic so that you can more easily follow how it works. It therefore runs much slower

than the more complicated code for the 'F' command, which is in machine-code. I = change the colour of a particular ink. This allows you to instantaneously alter the colour of all parts painted in that ink. S = Save the screen to tape.

## Program Notes

### Variables

ldscreen address of Spectrum dump loader  
attr routine to decode Spectrum colours  
fullsc routine to create compressed

picture  
xcoord,ycoord pixel coords for Spectrum  
amdad Amstrad display address  
spdad Spectrum screen address  
pixel%,  
pap%,nink%, pixel on/off, paper, and ink colours from Spectrum

### Line No

80-160 Initialisation  
170 Load Spectrum dump  
180-210 Set ink colours  
220-269 Select command  
270-320 Dump Amstrad screen  
330-350 Change ink colour  
360-370 Do compressed picture  
380-490 Do 'framed' picture  
500-660 Routine to create machine-code routines  
670-840 Code for Spectrum dump loader  
850-1100 Code for transfers.

## Joining up the dots

Part One of a general purpose plotting routine  
by John Cochran

When I am wearing my technical consultant's hat I often have to deal with collections of numbers of one sort or another. Staring at a jumble of numbers on a piece of paper is a mind-dulling experience and I will usually want to plot the whole lot out onto a sheet of graph paper as quickly as possible in order to begin to make sense of the data. This is where the QL should start making itself useful by quickly plotting my data for me. *Easel* is, unfortunately from my point of view, intended primarily for plotting financial data and

falls down rather badly when it comes to dealing with most other forms of data. The following program will fit a least-squares curve to a set of data and, after automatically scaling the graph, will plot out the data points and the curve.

In fact I have a number of versions of the program running on different machines and providing different facilities. The program has been written with this flexibility in mind and I have thus kept the thing as general as possible. As presented below, the program will plot up to three sets of data on a single graph.

presented below, the program will plot up to three sets of data on a single graph. A least-squares polynomial of order one to four can be fitted to each data set, or straight lines can be used to "join the dots". Up to 20 data points can be included in each data set. This number can readily be increased but the screen display can get crowded and the program takes longer to run. All the data is set up in *Data* statements, although here again modification to allow keyboard input would be quite simple. Another not quite so simple extension which I have working in one version is to get the thing to plot several separate graphs on the screen at one time, but the screen resolution means that the graph annotation has to be simplified if the graph size is reduced too far. Program notes and the rest of the listing next week.

```

# POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 25000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.
- **SUCCESSFUL SELEC** guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+16K), AMSTRAD, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, ELECTRON.

PRICE £15.00 (all inclusive)

FIXGEN 85/6

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1985/6. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)

## COURSEWINNER V3

THE PUNTERS COMPUTER PROGRAM

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc. etc. It outputs most likely winners, good long odds bets, forecasts, tricast etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date.

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC B, AMSTRAD, Atari (48K), Apple II

PRICE £15.00 (all inclusive) includes Flat AND National New versions.

## QUICKSHOT II JOYSTICK OFFERS

The world's most popular joystick at prices you can't refuse!

### SPECTRUM

Fully programmable interface with added Kempston option plus Quicksot II.

£31.90 £19.95

### ACORN ELECTRON

Joystick interface with programmable software plus Quicksot II.

£24.90 £14.95

### COMMODORE 16

Joystick adaptor plus Quicksot II.

£16.90 £10.95

### B.B.C. B

Joystick interface with programmable software plus Quicksot II.

£20.90 £12.95

### COMMODORE 64

Pair of Quicksot II joysticks.

£21.90 £15.95

To order either send cheque/P.O. stating requirements to address below, or ring (0533) 57479 or 21874 with Access/Barclaycard No. Alternatively ring for further product details. Please add 50p carriage for any order.

Dimension Computers Ltd.,  
27/29 High Street, Leicester LE1 4FP.

# A gentleman's excuse me

Interrupt driven music on the 64 from the keyboard  
of Gareth Thomas

**A**lthough the 64 has a powerful graphics and sound capabilities that are renowned throughout the computing world, to achieve a mixture of both these mediums in Basic is a slow and difficult process. This is where Machine Code comes in to help, in this case with the sound.

If you've ever wanted to play a little tune while juggling with your sprites and hires graphics (well nigh impossible in Basic) now's your chance. With this routine in operation you can play any tune you decide while your basic program can be left to do other things.

The program makes use of the Hardware Interrupt. This takes place every 60th of a second, during which time the processor drops what it's doing and jumps to a routine pointed to by the Interrupt ReQuest vector (IRQ) at \$0314 & \$0315 when it scans the keyboard, flashes the cursor, updates the system clock, etc. All this of course goes on unnoticed since it happens in a fraction of a second.

All my routine does is to alter the IRQ vector to point to my routine which is then executed before the process continues as normal.

## Program Notes

There are a number of memory locations which are used by the routine.

251 (low byte), 252 (high byte) - pointer-start of music.

253 (low byte), 254 (high byte) - pointer-repeat music.

828 - countdown to next note

829 - waveform (Poke without gate set, ie pulse = 64 not 65)

830 - Flag - play music

831 - Flag - repeat music

As you can see 251,252 point to the start of the music. The music will be played from this address onwards until a value of 0 is encountered for duration, when unless the repeat flag is set, play will stop. If the repeat flag is set play will continue from the address pointed to in 253,254.

The data to be Poked for the music must be in the form: *Hi,Lo,Duration,Hi,Lo,Duration* etc... The values for Hi and Lo can be found in the manual page 161. The duration is in 60ths of a second (ie, to play a note for one second the duration must be 60), the maximum duration being 255 which is 4½ seconds. Rests can be achieved by setting Hi and Lo both to 0 and then the duration to the length of the rest.

The parameters controlling the sound, such as the ADSR and waveform, can be changed at any time even when the routine is running without crashing the computer.

Finally the IRQ driver also disables the Run Stop/Restore keys which if pressed would reset the IRQ which would stop the music. To

set this to normal type *Sys 51859*, but if *Poke 830,0* is typed the keys will still be disabled and only the music will stop.

# You can do it!

## beginning machine code on the commodore 64

a simple introduction for beginners

david lawrence & mark england

You don't have to have a wet towel wrapped round your head and a bottle of aspirin at your side to learn to program your Commodore 64 in machine code — there is an alternative method. By concentrating on simple concepts, and by explaining every step carefully, with plenty of examples, David Lawrence and Mark England show it to you in their book *Beginning Machine Code on the Commodore 64*.

Although it can be difficult to become fully proficient in machine code programming, each instruction, in itself, is relatively simple to understand. The authors are careful to bring out this in their approach, showing clearly and carefully what each instruction does and how it is used. Then, when you feel more confident as a machine code programmer, you can begin to construct more and more adventurous routines from a collection of the simple individual instructions.

David Lawrence and Mark England are experienced machine code programmers on the Commodore 64, being authors of *Machine Code Graphics and Sound for the Commodore 64* and *The Commodore 64 Machine Code Master*, but not so experienced that they have forgotten the pitfalls and confusing points that await the beginner.

So, if you are ready to take your first steps into the world of machine code programming on the C64, this is the book for you.

Please send me \_\_\_\_\_ copies of *Beginning Machine Code on the Commodore 64* at £6.95 plus 60p p&p each.

☐ I enclose a cheque/postal order for £ \_\_\_\_\_ payable to Scot Books

☐ Please charge my Visa/Access card no. \_\_\_\_\_

# Down in the dumps

Your last helping of ZX! Basic code brought to you by **Stuart Nichols**

**P**ositively the last helping of code this week. Once again, use the Hexloader published in Vol 4 No 31 - to enter the hex dump.

Save the whole of Part Two as, Save "part two" Code 5904,5464, after Part One. Once verified, both can be loaded back into your Spectrum, and run using

Print Usr 62777.

You can now work through each of the instructions checking each one of them functions correctly. If any problems occur, check your code using the Hexdump program (with Goto 10).

Should all the typing be more than you can stand, tape copies can be obtained from me for £3.00. Write to 82 Lays Drive, Keynsham, Bristol BS18 2LE.

Keep your eyes peeled for a comprehensive demo program in Vol 4 No 36.

## Wally mania

**C**an I please ask for no more solutions to *Pyjamarama*, or *Sorcery* – the former was printed in entirety ages ago, and the latter we are not going to print because of the games wizard competition. I Grainger of 33 Wellfield Road, Wingate, Co Durham TS28 5LA has finished the latter with 98,000 and kindly offers help to anyone who sends him/her a large SAE. He/she has also scored 12550 on level 11 of *Blagger* and 91,840 on *Roland in the Caves* after escaping four times. We are also given this tip for *Steve Davis Snooker*: "When there is only the black ball left on the table abort the game. You should get a higher break than Steve (my real high break is 34 points)."

## On the edge

Here's a letter that I have been very slow in printing from George White of Bury, concerning help for *The Edge's Quo Vadis* for the C64. "The original question was how to deal with the 'snakes' and the 'heads' or 'faces' and before I could answer I would have to know which ones!"

"Some reports have it that you should shoot everything on the way down, to make the return trip easier, but because of 'one-way' traps you aren't coming back the same way. If an energy chest is in the room it may pay to clear the monsters, but the one-way system even stops you getting to some of the chests and to get to them again you have to return at a different level."

"Shooting nasties is comparatively easy firing from left to right – if you do it the other way you have to jump more to get out of the way. Firing up and down into chambers is hardest (I find it best to outrun them if possible)."

"I won't give away the posi-

tion of the riddles as that would remove most of the adventure part, but here they are: *A thousand added to everything loses fifty; losing the Dutch one, Royalty appears before me; Touro's force using only a knife, to eat an A1 solution; binary indecisions between silent beginnings and quiet terminations (a cruel one this as you kill yourself getting it); be sweet and be quick to go backward.*

## Money's worth

"I would point out that there are two rooms I have not got into, but I have found the sceptre and my high score is 528,000."

Sounds like you got your money's worth out of that game, George. He very kindly says that if anyone sends him an SAE and 20p to cover photocopying costs, he will send a copy of a map of the game. Write to him at 44 Tenterden St., Bury, Lancs.

Once the game is finished and you get back the rope, you get the last riddle: "When you think you are there, you really are not, you will have to return, for what you least forgot". George would like help with this riddle and Phil Walker of Skelmersdale writes that the message means you must press *Return* and it simply goes back to the title page.

Phil's goes on to say "My best buys for the Commodore are 1) *Quo Vadis* 2) *Raid over Moscow* 3) *Eureka* 4) *World series baseball* 5) *GoGo the Ghost*. My five worst re 1) *Arcadia* 64 2) *The Great Space Race* 3) *Gateway to*

*Apshai* 4) *Stellar Wars* 5) *Gilligan's Gold*. If anyone would like help with any of the games above, I'm at Skelmersdale 22938."

Mike Williams of Guisborough in Cleveland has sent in a superb letter full of pokes and tips for the Spectrum. Let's begin with the complete solution to *Every-one's A Wally*. "Get monkey nut to get into zoo. Dick takes plunger and monkey wrench to mend fountain. Gasmask to get in cave. Wilma takes rubber stamp and parcel to get stamped at post office."

"Fill bucket by walking past fountain. Wally takes full bucket and sand to get cement. Walk past wall with cement and trowel and wall will be built. When you are in the cave and want to get out without being savaged by the shark, wait until another character enters the sewer and do a character swap."

"Wilma has to take books 1,2, and 3 back to the library to receive jump leads, bunsen burner and letters B respectively. Kill a certain amount of aliens to lead electricity pylon nasties astray."

## Everyone's a Wally

Tom can get the flat car battery from the fork lift truck. Harry must walk over the blown fuse in the butchers with the pliers and fusewire and it will become rewired.

"Harry – take a good insulator and screwdriver to mend pylon. This sends power to the battery in BP. Harry takes the flat battery and jump leads to BP to recharge it."

Tom – put recharged battery back in truck. Wally go from truck on to wall to get letter K. Tom – oil can moves trolley in supermarket (it doesn't have to be full). Harry – jump on trolley and then freezer for letter A. Wally – get superglue and hook will be fixed. Put the hook back in the docks. Wilma swap stamped parcel with the letter E. Dick – gas pipe and chewing gum: drop the pipe on workbench and get the patch with the chewing gum. Walk under the leaking pipe and it will mend. Replace the pipe in the pipe in the cave."

Phew! What a marathon that was.

## Free Monty

Mike has also given some diagramatic tips for *Monty is Innocent*, which we can't easily reproduce here – so I will explain them. On the screen with all the keys number them 1 to 8, working from left to right and top to bottom. These keys then open these doors. On the screen with a long ladder on the left, and a short one on the right, the door on the left is key 1, the door on the right is key 5. On the adjacent screen with one long ladder on the right the door is key 2. On the long corridor screen, the doors on the left from front to back are 8,7,6. On the right from front to back, 4,3.

**Tony Kendle**

## We are searching for the top UK computer games player – the best there is!

The very best of Britain's game players will get to fight it out on a number of top secret new games – scheduled for release in the autumn.

### Here's how it works

Study the table below and look at the column for the machine you have – these are the games you'll need to master. Send your high scores in on the form below, making sure that your scores are authenticated by a responsible individual signing the form. Any score achieved using technical short-cuts – such as infinite lives Pokes – will not be accepted.

Between now and September Tony Kendle will be keeping you up to date on the *Arcade Avenue* page with just who has the scores to beat. Then, in September, the top three scorers on each machine will battle it out for a place in the final and the chance to be the first to play our 'top secret' games.

# SUMMER SALE!

## PRINTER OFFERS

**SHINWA/MICRO P CPA80**  
Bulk purchase allows us to offer this highly popular, high specification printer at an unheard of price. This printer, now reported to be the most popular in it's class, boasts many superb features. It uses square pins which avoids that "doty" look and gives a nicely formed up "near letter quality" print at 100cps. Friction and tractor feed are standard fittings and the dip switches are externally accessible. Take a look at these unretouched, actual size print samples.

Standard PICA text (100cps)  
PICA text emphasised  
True descenders on jpg etc.  
ELITE mode gives 96 columns  
CONDENSED mode gives 142 columns  
ENLARGED mode  
SUBSCRIPTS and SUPERSCRIPTS  
underlines nicely  
Italics available in all modes

We are convinced that this printer offers the best performance and value in it's class and at our unheard of price is a BARGAIN.

**ONLY £189.95**  
Price includes cable to suit BBC, Amstrad, Einstein, CBM 64, Dragon, Memotech or Orlic.  
For Spectrum owners c/w Kempston Centronics "E" £209.95

**ALPHACOM 32**  
Special Purchase allows us to offer these popular printers at a substantial saving on normal price

**ONLY £49.95**

**STAR SG10C**  
A superb new 120 cps Commodore ready printer that offers many features including friction and tractor feed, CBM graphics, near letter quality mode etc. Packaged ready to use at the special introductory price of

**ONLY £255.00**

**COMMODORE MPS801**  
Unbelievable price on this popular printer suitable for the '64 & Vic 20  
**ONLY £99.95 (this is not a misprint)**

# ST. O'TRINIANS!

That's what one paper called St. Bride's - the famous school where grown-up girls are transformed into schoolgirls. The others weren't silent either:

'A school for scandal?' asked the Telegraph.  
'All very pukka,' assured BBC TV News.  
'Bizarre!' shrieked the Sun.

Now you can find out for yourself as you guide Trixie Trinian through the classrooms, corridors and secret places of the *strangest school ever* - to uncover

## THE SECRET OF ST. BRIDES

A magical drama in over 100 scenes - Not so much a programme, more a way of life.  
'A bit of all right!' your 64.

**WHIZZ ME - THE SECRET OF ST BRIDES**  
at £6.95 post free.

## Earth-shattering

**T**he release of a new Level 9 adventure is, as we so rightly say, an earth-shattering experience (well a flag-day, anyway, for all aspiring adventurers!). *Red Moon* is no exception – in fact, I'm prepared to say that this is the most enjoyable of the Level 9 series since *Dungeon Adventure*. The new adventure is available on the Spectrum, Commodore 64, BBC and Amstrad.

You'll know by now that the game involves magic. The story goes that for aeons of time, the Moon glowed as bright as the sun, the colour of Magic. Its power bathed the Earth, and spells were widely and easily used. After constant battles with its rival, the Sun, the Moon eventually dwindled to what we know today, a pale shadow of its former glory. The magicians gathered to find a solution, and thus was the Red Moon Crystal made, a thousand-fold weaker than the original moon, but enough to keep an oasis of magic alive in the Moon Tower of Baskalos. Then the Moon Crystal was stolen. It is your task to recover the crystal.

Pretty standard stuff, but Level 9 have fashioned an extremely accessible adventure while retaining their customary verve and style. All the usual conventions are recognised, with the addition of magic spells which can be used by the player. Unlike other adventures which require lengthy processes in order to gain the experience required to wield spells, *Red Moon* provides each spell with a 'focus' object – find the Dulcimer, for example, and you can immediately use the *Escape* spell. This is particularly useful, allowing the player to jump right

back to the starting location and back again (thus easily storing treasures and so on); of course, without the Dulcimer, you're stymied. Other useful spells include the *Snoop* spell, which allows you to look into an adjoining room (to check for monsters), the *Shield*, which wards off attacks for a while, and *Zap* which of course attacks an enemy magically. One of the most useful is *Find*, which locates a given subject – simply by typing in the standard sort of treasure such as Rings, helmets and so on will give you an awful lot of information, not only on whether particular objects are present in the adventure, but also where they are, and the corollary of this is that you will find locations that you haven't yet stumbled across.

These spells are really useful and ensure that a lot of thought has to be given to the correct order in which tasks are undertaken. An ambitious detail of spell-casting, however, namely that spells can't be cast when in the presence of iron, occasionally comes adrift. For example, *Save* and *Restore* for some reason are spells, and so, if you are carrying the Horseshoe, you can't *Save* your position.

How many locations? The cassette in-

description of a very early location contained no less than two spelling mistakes – unforgivable in a full-price adventure!

No sooner had I got fairly well into *Red Moon* (and let me tell you that this is a very addictive game, being very easily mapped – until the player can no longer juggle all the objects and has to stop to work out the problems – and very atmospheric), than a list of hints came through from Mr M Kerr of Newcastle. Refer to the list of words at the end of *The Corner*:

To Drain The Lake; 8, 17, 30, 12, 19, 17  
To Get Through The Tiny Door; 23, 2  
To Get Past The Watchdog; 8, 21, 30, 36  
To Get The Sword From The Forge; 3, 38  
To Swim Underwater; 3, 31, 13, 16, 35, 1  
To Get Into The Metal Room; 3, 18  
To Be Safe On The Precarious Platform; 13, 10

Mr Kerr also needs help in opening the safe, getting the Iron Coins and also wonders what to do with the grid in the Metal Room. You need to Dial Safe, but I can't help you with the other questions. If you know better, write to him at 27 Eddington Grove, Chapel House Estate, Newcastle upon Tyne NE5 1JG.

## Quicksand

Mr Kerr also offers help in *Mordon's Quest*, which is from Melbourne House. I haven't seen this one myself, but I can pass on his help to others, hoping that it all makes some sense:

To Cross The Quicksand; 5, 29, 34  
To Get Past The Pigmy; 9, 32, 7, 14, 33, 6, 39, 33, 15, 24  
To Get Past Carnivorous Plant; 9, 24, 20  
Who Is King Of The Jungle; 37  
To Cross The Waterfall; 26, 37, 30, 11, 4, 28

Time for *Subsunk* from Firebird. Paul and Glenn Gilney would like to know where is the battery for the vacuum, where is the acid, and also how do you get the pills from the bottle without them getting lost on the floor. They would also like any clues for *Eye of Bain*, in particular, how to pass the Beast down the Well. Here, you'll need the Ruby – then type *See Fire*. Now, Enter Hole and progress from there. They have completed *Colditz* and *Valkyrie 17*, both with a little help from their dad ('are we the youngest at 13 and 10? I haven't the faintest idea, lads!). If you need help in those (as well as the venerable *Hobbit*, or can help them in *Subsunk*, write to them at: 9, The Hollies, Woodburn, Carrickfergus, Co Antrim, Northern Ireland.

1 FLASK 2 MUSHROOM 3 WEAR 4 GO 5 DROP 6 MAKE 7 BERRIES 8 PUT 9 USE 10 BRACERS 11 TEMPLE 12 HOLE 13 CARRY 14 THORNS 15 KILL 16 TUBING 17 HANDLE 18 BOOTS 19 TURN 20 BODY 21 PILLS 22 HII 23 EAT 24 PIGMY 25 PUT 26 SACRIFICE 27 JILLY! 28 NORTH 29 THE 30 IN 31 GASMASK 32 BAMBOO 33 TO 34 BLANKET 35 AND 36 MEAT 37 FROG 38 GLOVES 39 BLOWPIPE.

lay mentions "over 200", but I've only come across just over half, and several of these were "tiny passages", all the same, in the grand tradition. I know of at least three more that I haven't yet found, and presumably there are many more inter-connecting locations (see the *Find* spell).

While the mechanics of the game are rather different from other Level 9s, the location descriptions are written with the usual attention to detail and atmosphere. I was, however, disappointed that the

lem, send it to us, and a fellow adventurer may be able to help.

Remember – the system only works if those adventurers who have solved the puzzles get in touch. Every week is *Save An Adventurer Today* (SAAT) week!

## POWER WITHOUT THE PRICE

### THE NEW ATARI 520ST

Under the new leadership of Jack Tramiel (former boss and founder of Commodore Business Machines), Atari Corporation have marked their entry into the world of business/personal computers with a machine which leaves the competition standing. Tramiel's slogan 'Power Without the Price' has been implemented in the manufacture of the new 520 Atari 520ST colour computer which offers the user amazingly high performance at an incredibly low price. Launched as a work station, this new system incorporates seven software packages as well as the 520ST computer with 512K RAM, mouse controller, high resolution, microprocessor monitor (540x400), 95 key keyboard with 18 key numeric keypad, MIDI interface, GEM and a 500K 3.5" inch disk drive, all for the package price of only £681.30 (VAT - £749). Dubbed the Mac-beater and the Jackintosh (after Atari's Chief Executive, Jack Tramiel), Atari's new machine has been directly compared with the Apple Macintosh RRP £2995 (VAT - £3295) which offers similar features and capabilities but at a much higher price. Favorably reviewed by the UK's highly critical specialist computer press, the 520ST is likely to make a great impact in this country as a sophisticated alternative to an IBM PC, Apple II or Apple Macintosh. Unlike its overpriced competitors, the Atari 520ST can be looked up as a colour monitor to unleash a choice of up to 512 colours. The addition of colour brings out the full potential of graphics packages such as GEM.

### USER FRIENDLY GEM OPERATING SYSTEM

The power of the ST is harnessing itself very much more than the new operating system GEM from Digital Research. GEM offers a graphics environment which allows a user friendly colour or B/W graphics interface which closely resembles that of the Macintosh. The similarity extends to the use of moveable resizable windows, icons to represent objects such as disks and disk drives, and the use of pull-down menus and a mouse. The advantage of all this is that the computer becomes extremely easy to use. GEM has now been implemented for the Acorn, ACT, Atari, IBM, ICL and Olivetti. Software written for GEM on one computer should also run under GEM on another computer. This will enable the market to quickly produce a large library of standard interchangeable software.

### FREE SOFTWARE AND FUTURE EXPANSION

The Atari 520ST comes supplied with seven software packages as listed below: 1. TOS (Tramiel Operating System) based on GEM 2. GEM Graphics Environment Manager by Digital Research; 3. DRiving a WIMP (Window, Icon, Mouse, Pull down menu) environment; 4. DR GEM Paint for creating graphics masterpieces; 5. DR GEM Write for word processing; 6. GEM learning language to enable you to write your own programs easily using built-in graphics; 6. DR Personal Basic a powerful user friendly version of the Basic programming language; 7. GEM operating system giving you access to dozens of business applications packages already available on the market. Designed with future expansion in mind, the ST also features a host of different interfaces to the outside world and an impressive list of accessories is planned. Atari will soon be releasing a 2000K (1MB) 3.5 inch disk drive, and a 15MB hard disk storage system as well as a mass storage compact disk (CD) player capable of storing an entire 20 volume encyclopedia on one disk. A full range of inexpensive printers are planned including dot matrix, daisywheel and thermal colour printers. With its unbeatable graphics, speed and software at a price which is far below that of any comparable personal computer currently on the market, the ST is set to go down with the competition. To receive further details of the ST from Silica Shop, just fill in the coupon below with your name and address details and post it to us.

Silica Shop Price: £681.30 - £970.70 (VAT) - £749.00. This price includes:

- \* 512K RAM
- \* B/W MONITOR
- \* MOUSE
- \* 500K 3.5" DISK DRIVE
- \* GEM
- \* KEYBOARD (95 KEYS)

## ATARI 520ST SPECIFICATION

### MEMORY

110K ROM (24M Bytes)  
128K ROM expandable to 320K  
Port for Atari 128K disk in ROM cartridge  
200K TOS operating system

### GRAPHICS

Unusually addressed 22M to megabyte screen with 7 colour graphics modes  
320x200 pixels in 16 colours (low resolution)  
640x400 pixels in 5 colours (high resolution)  
640x400 pixels in monochrome (high res)  
16 shades of grey in low mode  
312 colours available in 16 megabyte mode  
8 levels of colour in red, green and blue

### ARCHITECTURE

4 channel integrated CPU  
ULSI Chip - MMU Memory Mapped unit  
DMA Controller - Graphics Processing Unit  
16.5M Motorola 68000 processor @ 8MHz  
up to 32 on disk addresses  
up to 32 on disk registers  
17 bit data bus (24 bit address bus)  
7 levels of interruptible I/O instructions  
14 addressing modes/12 data types

### DATA STORAGE

High speed hard disk interface  
Direct memory access 1.5M Bytes per second  
CD Compact Disk interface  
Built-in cartridge access  
Optional floppy disk drive

### DISK DRIVE

ST formatted, 5.25" 5 1/4" floppy disk drive  
300K formatted storage capacity

### SOUND AND MUSIC

Sound Generator  
Frequency control from 30Hz to above 20kHz  
3 voices (extended) in stereo (stereo sound)  
in addition to a tone generator  
Automatic frequency and volume controls  
Stereo output  
ACORN, ACT, Olivetti, Steinar, Release  
noise generator  
MIDI interface for external music synthesizers

### KEYBOARD

95 key keyboard mechanism  
Advanced Olivetti typewriter styling  
Ergonomic shape and layout  
30 keys (including 18 function keys)  
Numeric keypad - 18 keys including ENTER  
One touch cursor control keypad

### MONITOR

ST formatted - high res monochrome monitor  
640x400 monochrome resolution  
Note: Some of the above specifications are pre-release and may therefore be subject to change

### VIDEO PORTS

Display - Low Resolution 640 columns  
Medium Res - 640 pixels  
Medium Res RGB (Red/Green/Blue) output  
High resolution monochrome (Black & White)

### COMMUNICATIONS

Non-volatile centronics parallel interface for printers or modems (serial or microprocessor)  
RS232C serial modem/terminal interface  
12 Terminal emulation software  
Maximum baud rate up to 19,200  
High speed serial (LX24V)  
FDDI port (optional)  
2 serial ports (one for 2-bus/terminal)  
MIDI interface for external music synthesizers

### GEM WIMP ENVIRONMENT

WIMP - Window Icon Mouse Pull down menu  
Two button mouse controller  
Mouse/PA down menu/Window  
GEM VDU - Virtual Display Interface  
GEM APL - Application Environment Services  
GEM B/W - B/W Transfer  
Real time clock & calendar

### SOFTWARE

GEM environment  
Self-use friendly Macintosh style operation  
TOS - Tramiel Operating System  
Atari can extend disk on CPM disk with hierarchical directory & file structure plus a host of MDCS & Atari commands including  
MOS - Business Coping System  
to run any standard DOS business programs  
GEM Paint  
with GEM Paint graphics input system and GEM with 16 bit processor  
Personal BASIC and DR Logo  
originally written by Digital Research (DR)  
very much less made on other software  
designed for the extensive use of pull down menu, mouse control and windows

### VARIOUS

Commodore 486/586/686/786/886  
Real-time external audio processor  
Expansion for Super disk drives 300K/1000K  
(Two drives can be connected)  
CD compact disk drive  
CD-ROM drive  
CD-ROM drive  
CD-ROM drive  
CD-ROM drive

### LANGUAGES

BASIC & LOGO included  
Many other will not be available, including  
the UK's NUMBER ONE Atari specialists  
Lisp, Modula-2 and Pascal

## MACINTOSH v F16 v 520ST

Temple a Fiat Mac - the 512K Apple Macintosh - but with a bigger screen, a far greater keyboard with numeric keypad, cursor and function keys, and colour. That gives you some idea of what the Atari 520ST is like, except for two important things. First the Atari beats faster! Second the Atari system is about one third of the price!

June 1985 - Jack Schofield - PRACTICAL COMPUTING

## PRESS COMMENT

"The new Atari ST is a machine of a work of art. The best of the 520ST is a Macintosh 68000, one of the most powerful 16 bit microprocessors around and in many respects it is close to being a 32 bit chip - when the machine appears in the shops. It is at the heart of the system to buy one."

Peter Bright June 1985 PERSONAL COMPUTER WORLD

"This machine is significantly more powerful than an IBM PC. It is a good reason to design a winning machine like this."

May 1985 PERSONAL COMPUTER WORLD

"The use of GEM makes the new range of Atari computers so similar to the Macintosh (with the added attraction of colour) that they are already being called 'Jackintosh'."

May 1985 PERSONAL COMPUTER WORLD

"The new Atari ST computers truly represent to the consumer what Jack Tramiel is saying - see how much computing power without the price!"

June 1985 ANALOGUE COMPUTING

"[The ST] uses the most modern technology that is affordable in a package that gives a professional impression."

May 1985 POPULAR COMPUTING WEEKLY

"The Atari ST is one of the most elegant designs I have seen. Atari has used an original and elegant method of memory management and should make the ST better than any other PC on the market - in my price bracket - the 64K dollar question is: would I go out and spend money for what I want the only answer is 'Yes' and 'No'."

John Lambert July 1985 ELECTRONICS & COMPUTING

"The 520ST is technically excellent. The 520ST hardware is the new standard to which others will be judged."

July 1985 YOUR COMPUTER

# SILICA SHOP

ATARI WE ARE THE UK'S No1 ATARI SPECIALISTS ATARI

At Silica we have been successfully dealing in Atari ever since their products first appeared on the UK. We can attribute our success largely to the Atari specialisation which we practice and to the user back-up we provide. Rest assured that when you buy a piece of Atari hardware at Silica you will be fully supported. Our mailings giving news of software releases and developments will keep you up to date with the Atari market and our technical support team and sales staff are at the end of the telephone line to deal with your problems and supply you every need. With our specialist bias, we aim to keep stocks of all the available Atari hardware, software, peripherals and accessories. We also stock a wide range of Atari dedicated books and through us, the owners on our list can subscribe to several American Atari dedicated magazines. We can provide a full service to all Atari owners and are now firmly established as the UK's NUMBER ONE Atari specialists. Here are just some of the things we can offer to our customers.

- \* FREE POST & PACKING ON MAIL ORDERS
- \* FREE NEXT DAY SECURIOR DELIVERY
- \* INFORMATION MAILING SERVICE
- \* TECHNICAL SUPPORT TEAM
- \* HIGHLY COMPETITIVE PRICES
- \* AFTER SALES SUPPORT SERVICE
- \* REPAIR SERVICE ON ATARI PRODUCTS

If you would like to be registered on our mailing list as an Atari computer owner, or as a person interested in buying an Atari machine, let us know. We will be pleased to keep you up to date with new Atari developments free of charge. So, return the coupon today and begin experiencing a specialist Atari service that is second to none.

## SERVICES

MANCOMP SPECTRUM MANCOMP BBC MANCOMP

# EXPRESS SPECTRUM & BBC REPAIRS!!

First company in all U.K. to introduce while-u-wait service. Now first to offer an international repair service!

"I have come across a firm that will be more than willing to advise you as to how to remedy your problem. They are called MANCOMP, and as well as repairing faulty Spectrums, are also quite willing to discuss your problems with you, and offer reasonably cheap, and (MORE IMPORTANTLY) correct cures."

Phil Rogers 'Peek & Poke', 'Popular Computing Weekly' Jan. 1985 [Vol. IV, No. 1]

"My Spectrum blew recently. I took it to MANCOMP, who fixed it in 8 minutes! And for less than £10. They are local, clued up, and blindingly efficient."

Computer column, '4 Heatsons Digest' [Vol. I, No. 11]

"One firm, at least, can usually effect any necessary repair over the counter in 45 minutes. Based in Manchester, MANCOMP can offer what is arguably the fastest turnaround in the business, to personal callers..." 'Crash Magazine', June 1985

"Of all the repair companies 'Sinclair User' spoke to, MANCOMP seemed the most professional when it came to advice and a helpful attitude". August 1985

- Send Spectrum encl. £1.80 return postage (U.K.), £2.50 (Europe), £6.50 (Middle East, Africa).
- Or phone/bring Spectrum for free, no obligation estimate.
- We repair most Spectrums in minutes.
- Every Spectrum sent insured and by receipted parcel post (U.K.), registered air mail if overseas.
- No hidden costs.

**MANCOMP LTD.** (Dept P33),

Printworks Lane, Manchester M19 3JP.

Phone **061-224 1888/9888**

Open 9a.m. till 7p.m. Mon. to Sat.

We also design hardware and software from idea through to manufacture.

## UTILITIES

### NEW TAPE TO DRIVE TRANSFER OF RECENT PROGRAMS

SPECTRUM owners can even transfer many of the LATEST fast/jerky programs to their drives at **LOW COST** with our software and information sheets. No risk as our programs carry our **MONEY BACK GUARANTEE** (not updates).  
Firstly you will need our MD1b (or midrive) or WD1b (for Wala or disc drive) programs. Includes the ability to chop/split bytes in one go, bytes move, VAL creator and REMkill. Make visible etc. **FULL** manual with example transfers. **MD1b or WD1b cost on tape £6.99**.  
MD1b manages more programs - **Your Spectrum**.  
To manage the latest programs you will also need our T7 program which INCLUDES the ability to ALTER fast/jerky loaders to "normal".  
\*Features: Baud rate measurer  
\*Jerky detector  
T7 cost £6.50 on tape. On midrive cartridge £9.99 (incl MT6, an extra midrive utility).

### NEW LERM INFORMATION SHEETS

Each sheet gives you the DETAILED instructions (using our software) required to transfer to your drive 8 of the more POPULAR programs. They cost **£2 EACH** plus SAE. Up to sheet 4 available.  
**SPECIAL OFFER - TRANSFER PACK.** Buy MD1b + T7 on a midrive cartridge + INFORMATION SHEETS 1-3 for £15.50 (other drive owners get MD1b + T7 on tape + sheets for same price).  
**UPDATE SERVICE:** Send old tape + large SAE to get a £2 REDUCTION. OVERSEAS: add £1 Europe. £2 others for each product. SAE for enquiries. PL400

Winning phrase No 38: "Acorn due at hades" from David Blackledge, of Bolton, who receives £25. Runners up: "Rail station chef dead" from John Brownhill of Milton Keynes and "Dial 'D' for death" from R Robertson of Mossend, Lanarkshire.

## Now voting on week 40 - £25 to win

Each week *Popular* is compiling its own special software top ten chart - compiled by YOU.

And each week we will send £25 to the person who sends in, with their chart votes, the most original (witty, neat or clever - but never rude) phrase or sentence made up from the letters (you don't have to use them all) in the titles of the top three programs in this week's chart, published above.

You can still vote in the chart without making up a slogan - but you won't be in with a chance of winning the prize.

All you have to do is fill in the form below (or copy it out if you don't want to damage your magazine) and send it off to: Top 10, *Popular Computing Weekly*, 12-13 Little Newport Street, London WC2H 7PP.

Voting for Week 40 closes at 2pm on Wednesday August 28 1985. Entries received after that time will not be eligible for inclusion in that week's voting. The judges decision is final. Only one entry per individual per week will be allowed.

Name .....	My top 3: Voting Week 40
Address .....	1 .....
.....	2 .....
.....	3 .....
My phrase is: .....	

## CHOCES AWAY

*Dam Busters* on the Spectrum is a surprisingly good impersonation of the game originally released on the Commodore.

The game simulates the attack on the Moehne, Eder and Scorp dams by a flight of Lancasters carrying the most Monty Pythonesque weapon of war ever invented, the bouncing bomb.

The challenge consists not only of piloting the plane using an icon-like system to adjust levels of throttles, power boost, flaps, etc, but manning every other key site on the plane where appropriate – the bomb bay, rear gunner and front gunner.

The full mission consists of successfully taking off from RAF Scampton, through flak, avoiding baddie planes and eventually blowing the dam to bits.

All the controls are presented in close-up as separate screens which adds to the realism but does mean shunting around a lot. For me the balance between blasting and flying is about right – the

Lancaster isn't horrendously difficult to fly but neither is it a bland up-down-left-right arcade zap. The landscape graphics are nothing too special but are good enough for a sense of atmosphere to be maintained.

One of the better flying efforts.

## RIPPING YARN

Here's weird. In Ireland there really exists a school especially designed for women who want to pretend to be schoolgirls. Schoolgirls of the type found in all the best *Girls Own* annuals.

It involves much dressing up and having a ripping time being terribly naughty and having midnight feasts in the dorm.

People pay money for a week or so of this, and I suppose it's no stranger than, say, pretending to be a wizard or elf on an adventure weekend.

Anyway the ethos of the school has been captured in a graphics adventure written with the *Quill* and *Illustrator*. You play Trixie Trinian and along with your friends Fiona and Cynthia investigate the strange goings on at St Brides School. Yes, there are strange goings on (other than merely the fact that grown

women pretend to be schoolgirls) – there is a mystery.

Of the nature of the mystery and the way you solve it I can say little, except that it helps if you can convince the teachers you are one of them.

Though slow to be drawn, the relatively simple graphics are effective and add to the atmosphere – all musty school rooms and endless hallways. The descriptions seem good too and I found myself well hooked.

However, whilst getting on reasonably well with the absolutely whizzo adventure of the secret of St Brides, I now discover that the ultimate task is to find an amulet which lurks in locations that I, as a wet-behind-the-ears new chap, stand absolutely no chance with.

Nothing technically clever about the game given that it's all *Quilled*, obviously, but it seems very entertaining; it has a lot of tongue in cheek humour, I can also think of a lot of macho Orc-slaying adventures who could do a lot worse than playing this game.

## BURN UP

*Speed King* is one of the more interesting bike race games I've seen in a long while. Its strength is that, whilst there is a level of authenticity about its presentation of 10 world

famous circuits on a Suzuki, it is easy to get going and a lot of fun to play.

All controls are through the joystick and fire button, including gear changes, acceleration and leaning left and

right around the corners (watch the way the rider puts his foot out). There are plenty of other riders on the track, although it was a long time before I saw much of them after the start of the race.

The graphics are excellent with the sense of distance being achieved far more realistically than in most similar games – the way you start to approach the other bikes is extremely smooth.

It feels fast and beats hands down most of the *Pole Position* variants that are around.

## DOCTOR IN CHARGE

According to Sinclair the QL microdrives are absolutely fine, wonderful and a big step forward over floppy discs - this is true if you accept the concept that saving and loading data is not actually the point of microdrives. The point of microdrives is only to be very very small.

Having just lost 850 words of an article I had foolishly typed on *Quill* and saved to microdrive, I was in a desperate but appropriate condition to examine *Cartridge Doctor* from Talent Computer Systems. Probably the most vital utility non-disc drive owning QL users could buy.

It's that blank *bad or changed medium* that rangles - it's so smug: 'well you certainly don't expect me to try and load anything from that, do you,' it seems to say. And what does *changed medium* mean? I always have visions of some sneaky QL-

hater taking bits of tape out of microdrives and replacing it with some strange unexpected material like sticky tape or elastoplast.

Anyway *Cartridge Doctor* managed to recover nearly half of my lost article, not such that I could load it back into *Quill*, but at least so that I could read it on screen. It's extremely easy to use - most processes are automatic and most options have defaults for the most common choices.

It works like this. You load the *Doctor* into the QL then choose microdrives for the source microdrive and destination microdrive (if it's to make a new file).

The most common option is *Autoclone* which reads all the files on the microdrive assessing their condition.

Some may be pronounced 'good' which means they can be completely recovered and transferred to a new tape. Others may be

found to have one or more doubtful blocks of information.

Files with doubtful blocks may then be patched, a process where each block is loaded up on to screen, where it may be corrected manually, rather like wordprocessing - you move a cursor around deleting characters, etc.

It doesn't seem to be one hundred per cent reliable, though. Some blocks of my *Quill* data proved to be screens full of question marks (maybe I was drunk when I wrote it) but basically my conclusion is simple. QL owners must buy this program.

## WORD PLAY

Some Spectrum owners and not a few Commodore fans would vote, finally, for *Scrabble* as their favourite game on their computer.

It's something to do with the seeming artificial intelligence involved, with the sense that you are challenging the machine with what humans are supposed to be best at, ie, word skills. It helps, of

course, that even as a board game it's superbly addictive.

Good news for Amstrad owners then that *Scrabble* is at last available on the machines. It's a fine implementation and, because of the Amstrad monitor, it's the clearest of all the versions.

The vocabulary of 11,000 words gives you a difficult game at the harder levels. I think a reasonably committed *Scrabble* player should win more often than not, but nev-

er easily.

Computer *Scrabble* has one major additional virtue for kids - if anything is going to persuade your parents to buy a computer this game is it - drag them into a shop and make them play it.

## SWASHBUCKLING

*Robin of Sherwood* features some of the slickest graphics I've ever seen in a game of this kind.

If you persevere through the difficult opening section,

there is an absolutely stunning screen of a waterfall.

But first you must release Robin and friends, trapped in a cell awaiting a stiff talking to for venison highjacking. Getting out of the cell is very complex indeed (although to be fair it's exactly how it would happen in a swashbuckling film).

The actual myth of Robin seems to need little embellishment to turn it into the classic adventuring saga - and I found this the most gripping adventure I've seen for ages.

## Survival plan

**A**n article published recently on the evolution of fifth generation computers explained how these machines will probably be able to do more or less anything we ask them to.

How many times have you read something similar? Yet somewhere under the words, a rather bizarre confusion of ideas seems to be lurking.

On the one hand there is the metaphor of evolution and everything that suggests in the way of raw Darwinian struggle, blood-stained teeth, the triumph of those best suited to survive, and so on. The tough and ugly face of Nature at its nastiest, as the generations of creatures pit themselves against the brutality of the real world that their creator – or blind chance – condemned them to live in.

Yet for some reason – maybe not unlinked to the desire to sound portentous – this word has become applied to the development by thoughtful, caring humans of willingly servile computers, happy apparently to obey our every whim. The fantasy is given classic form by science-fiction writer Isaac Asimov and his silly-solemn Laws of Robotics – the first and greatest of which is that no robot may ever harm a human being. (And can you really see the military supremos of either superpower keeping to that kind of rule?)

What a contrast between the two ideas.

Can you imagine any species struggling to evolve into a race of servile fools? Even the most docile herbivores, even the blindest and most wretched

among liver-flukes, have more independence. Their existence may not be particularly dignified, but at least they retain some small area of self to call their own. The lamb may trot obediently to the slaughter, but at least it can choose whether to bleat when it sees the knife.

A computer, though, is always the prisoner of its program, and in turn the program of its author. Even the most open-ended of flexible expert systems, though capable perhaps of many nifty tricks, and of deductions unsuspected by its designer, cannot go beyond its brief – cannot turn away from its set purpose to do something more interesting, or something more important, or even something utterly vital to its survival.

For a species actually to evolve in any real sense of the word, surely it needs at least this degree of independence? Plus a capacity to protect itself (whether by teeth or camouflage), a talent for adaptation, and the ability to breed. How many of these has your Spectrum Plus got?

But of course it would be rather fascinating to see machines genuinely evolving. And by no means beyond the scope of possibility. All you'll need to arrange would be a robot with a good sized computer for memory, an easily available and re-chargeable power source, sensors so that it could decipher its environment, motor ability, and enough manual dexterity to assemble others of its kind. It would also need to have, programmed deep into its hardware, at the same fundamental level that modern machines are compelled to follow the paths of strictest logic, a will towards an effective independence of Man, (though it would need to be symbiotic with him). Useful talents might include the ability to forage for materials, to think creatively, handle a sawn-off shotgun, locate unprotected sub-post-offices, evade the police, hide out in the Welsh hills, etc.

Just a few generations of these beasts, and we'd see some genuine evolution. The results would undoubtedly be fascinating.

Mind you, there could be disadvantages...

George Simmers

## Down on the farm

### Puzzle No 171

When old farmer Jorkins died he left his entire estate to be divided equally between his two sons. This was done quite satisfactorily except for just one rectangular field. This was a bit of a curiosity as the old man specified that the field was to be divided in half diagonally, from corner to corner.

However, there was a method in the madness. If the field was divided in this way, each piece of land would have sides that were all an exact number of yards in length. Further, both sons would each receive 666,666 square yards in area. Can you find the dimensions of the field?

### Solution to puzzle No 166a

Of the 5040 possible combinations that can be formed with the seven cards, 576 of them are divisible by eleven. This reduces to 4 chances in 35 – slightly better odds than the 1 in 11 chance anticipated.

```
10 LET YES=0:LET NO=0
20 FOR A=1 TO 7
22 PRINT A
30 FOR B=1 TO 7
40 IF A=B THEN GOTO 220
50 FOR C=1 TO 7
60 IF A=C OR B=C THEN GOTO 210
70 FOR D=1 TO 7
80 IF A=D OR B=D OR C=D THEN GOTO 200
90 FOR E=1 TO 7
100 IF A=E OR B=E OR C=E OR D=E THEN GOTO 190
110 FOR F=1 TO 7
120 IF A=F OR B=F OR C=F OR D=F OR E=F THEN GOTO 180
130 FOR G=1 TO 7
140 IF A=G OR B=G OR C=G OR D=G OR E=G OR F=G THEN
GOTO 170
150 LET N=A*1000000+B*100000+C*10000+D*1000+E*100+
F*10+G
160 IF N/11=INT(N/11) THEN LET YES=YES+1 ELSE NO=NO+1
170 NEXT G
180 NEXT F
190 NEXT E
200 NEXT D
210 NEXT C
220 NEXT B
230 NEXT A
240 CLS:PRINT "YES=";YES;"NO=";NO
```

The program generates all possible combinations of the seven digits, 1 to 7, with no digit repeated, and checks each to determine if it is an exact multiple of eleven.

### Winner of Puzzle 166

The winner is Sam Nash of Leeds, West Yorkshire, who receives a prize of £10.

### Rules

The closing date for Puzzle 171 is September 18.

## The Hackers

# Spectrum + OCP

**SNOOKER - VIDEO POOL** (OCP) is a recent addition, and is probably the best of the lot" ... CRASH May 1985

## OCP Classic Games Offer -

- \* Full and detailed instructions on every aspect of the games.
- \* Excellent value for money.
- \* Games that you never will grow tired of.
- \* Atmosphere, great graphics and game play.
- \* Games to challenge your skill and judgement.
- \* Microdrive compatibility for Roulette and Pontoon.

"CASINO ROYAL is a very pleasing version ... well worth considering" ... CRASH May 1985

### Video Pool 48K Spectrum £5.95

A highly sophisticated simulation of the game of pool guaranteed to test your skill and judgement to the limit. The smooth flicker free movement of the balls, accurate calculation of the angles and speed make this the best version of pool available for the Spectrum.

### Casino Royal 48K Spectrum £5.95

Roulette and Pontoon are the classic games featured with all the atmosphere of the real thing with the Currah Microspeech facility. Roulette is for up to six players. Full table layout with superb wheel action. Teaches you roulette and maybe will help you to win a fortune!

Pontoon also known as Blackjack is just you and the bank. Superb graphics, and a pot of money is all you need to give hours of endless fascination.

Another classic winner from OCP is **CHESS - THE TURK** which is very popular, and deservedly so, since it was launched. Probably the best chess game for the Spectrum around. Outstanding features include: Blitz chess, Demo mode, Replay, Edit/set-up, List moves to screen and printer, line print the board, save moves and board, load moves and board. There are six levels of play and all the normal chess moves are made with ease. If you can't beat 'em - join 'em in other words you can use the **HELP** key! A bargain at £5.95
